

CASE STUDY

Bredäng centre, Sweden

Using creative lighting can go a long way towards instilling new life and renewing any conceivable environment. The Bredäng environmental programme in south Stockholm is a good example of this.

The search was on to find a package solution that would work as both railings and lighting in Bredäng centre. The result was the Railer handrail light fittings. There are now over 250 metres of Railer installed in Bredäng centre, along pathways, in tunnels and in stairwells. This unobtrusive lighting contributes to linking together different public places in an effective way. And as you might expect, Aura Long Life is installed in all fittings!

Reduced maintenance costs

– In the vandal hit area of Bredäng, luminaries were required to have an extra high sealing class, and by selecting Aura Long Life we reduce maintenance costs and avoid the unnecessary replacement of spent lamps, says Sören Spetz.

Aura Long Life - a working concept

– We use Aura Long Life in many areas of Stockholm as we know that the Aura Light Long Life concept really works. Furthermore, Aura Light gives us safe and reliable delivery dates, which is very important to us as we have projects that are constantly overlapping and we cannot afford any delays, says Sören.

About Aura

Aura supplies Long Life light sources and solutions. With a lifetime that is at least three times longer, you can reduce your maintenance costs and environmental impact by a third. With our T8 Eco Saver and Eco Lighting Solutions, you can also reduce your energy consumption dramatically, thus reducing your energy costs and carbon footprint further.
