

CASE STUDY

Düsseldorf Airport, Germany

Düsseldorf Airport is one of the most important air traffic hubs in Europe and the third biggest Airport in Germany. It is important for the airport that the lighting is of high quality and efficient. What once was strictly a traffic interchange has become an area where a steadily growing number of top-rank businesses from the retail and service sectors have set up operations. Many brand name merchandisers of international status have retail shops in the airport shopping mall at Düsseldorf airport.

Improved safety

Horst Reinhart explains Why they choose Aura Long Life: "In the departure hall the lamps are placed high up in the ceiling and we only can reach them if we have special tools, because of that we choose Aura Long Life. We wanted to improve the safety in the airport, and therefore we choose Aura Protector Long Life. Aura Long Life can be used in a lot of different places. We use Aura Long Life in our commercial signs, in the emergency signs and we also have Aura Thermo Long Life outside the airport since they give a very good light even when it is cold outside."

A lot of cost reduction

"Just by choosing Aura Long Life we save at least two lamp replacements. This also means we that we saved all the costs associated with the replacements and there was no need to interrupt the normal operations of the airport. We reduce a lot of costs and it is great! Because we use Aura Light as our supplier we use less material and less transportation, which also is an important component due to the environment", Horst Reinhart says.

About Aura

Aura supplies Long Life light sources and solutions. With a lifetime that is at least three times longer, you can reduce your maintenance costs and environmental impact by a third. With our T8 Eco Saver and Eco Lighting Solutions, you can also reduce your energy consumption dramatically, thus reducing your energy costs and carbon footprint further.
