

CASE STUDY

Findus production plant, Sweden

The Findus production plant in Bjuv is one of the group's largest in Sweden. Findus Sverige AB, which has been owned by the investment company EQT since 2000, is one of the country's leading food companies. Frozen readymade dishes, fish and vegetables currently dominate the range, but Findus also supplies the convenience goods market with mayonnaise, pasta sauce and marmalade. Findus also makes food for restaurants and catering services. Everything takes place under fluorescent lamps from Aura - for economic, quality and safety reasons.

If an accident should occur

Findus observes the EFSIS food standard. They obviously want to eliminate the risk of glass in their food. Mats Bernhardsson from Findus explains.

– In the food industry we are looking for either sealed and splinter proof light fittings or fluorescent lamps. As a means of insurance we have installed Aura PROTECTOR Long Life above all of our transport aisles and in our warehouses. This fluorescent lamp is fitted with a smart, external "safety stocking" of thin plastic that captures glass splinters and luminescent material if an accident was to occur.

Frees time for other things

Findus has been buying Aura Long Life fluorescent lamps for over ten years.

– The reason for selecting Long Life was that we wanted to have fluorescent lamps with a longer burn time. We gain a lot by avoiding replacements, in that we save on renting lifts and the cost of unsocial working hours. And we avoid a lot of climbing. The longer the fluorescent lamps burn, the more time we have for other work tasks.

About Aura

Aura supplies Long Life light sources and solutions. With a lifetime that is at least three times longer, you can reduce your maintenance costs and environmental impact by a third. With our T8 Eco Saver and Eco Lighting Solutions, you can also reduce your energy consumption dramatically, thus reducing your energy costs and carbon footprint further.
