

# CASE STUDY

Slachthuis Nijmegen BV, Holland

At the abattoir in Nijmegen, livestock whose meat is destined for human consumption are not only slaughtered but also inspected. The meat from such animals is then refrigerated and subsequently transported to butchers and other meat processing plants or points of sale. EU directives stipulate that all abattoirs must adhere to strict hygiene standards relating to their construction, equipment and use.

#### **Why have you chosen Aura Long Life?**

These lamps have a longer lifetime even in low-temperature environments and produce a more even level of light. One additional effect of this is that the meat has a better colour when on display for sale.

#### **Why have you chosen Aura Light as your supplier?**

A few years ago, Aura's Managing Director came up with a new lamp and said that this Thermo long life lamp is a perfect lamp for cold environments. That was the moment we chose Aura Light, and we are still very satisfied with them.

---

#### **About Aura**

Aura supplies Long Life light sources and solutions. With a lifetime that is at least three times longer, you can reduce your maintenance costs and environmental impact by a third. With our T8 Eco Saver and Eco Lighting Solutions, you can also reduce your energy consumption dramatically, thus reducing your energy costs and carbon footprint further.
